LETTER TO THE OWNER

A Letter to the Owner

OF A COMPANY REGISTERED ON THE BLOCKCHAIN

05081966.eth

A gift of a new generation.

A digital company built for long-term ownership, autonomous operation and a transparent cash flow.

The Company's address is registered to the owner's date of birth. No other name like it exists.

Congratulations.

Today you became the owner of a company.

Though not quite an ordinary one.

It has no office. No employees. No chief executive.

It exists entirely in the digital world.

It works around the clock — and belongs to you alone.

A new form of ownership

Ownership used to be simple and tangible: land, a house, gold.

Then came shares — a stake in a business that works, grows and can share its profits.

Today a new form of ownership is emerging: the digital company.

It lives on the blockchain, owns digital infrastructure, can earn cash flow — and is passed on with a physical key.

One of these companies is now yours.

What is it?

A new-generation digital company built on three foundational assets of decentralised finance.

Its purpose is not short-term speculation.

Its purpose is to hold, for the long term, a piece of the infrastructure of the new digital economy.

Your company has room to grow over many years: through the growth of the assets inside it, and through the growth of the cash flows those assets can generate.

A simple analogy

AN ORDINARY COMPANY

It owns assets.

The assets work.

If the business develops, the value of the company can grow.

YOUR DIGITAL COMPANY

The idea is the same — except instead of offices, managers and banks there is blockchain, code and open digital infrastructure.

When value is created, part of it can return to the owner.

The foundation of the company

Three elements. One system.

A	**Aero Finance** Infrastructure for trading, liquidity and the movement of capital.	33.3%
C	**Curve Finance** One of the core protocols for exchange and liquidity in DeFi.	33.3%
F	**Frax Finance** Infrastructure for stability, liquidity and digital capital.	33.3%

Three carefully chosen elements — each playing its part within a single system.

How do they earn?

HOW THE PROTOCOLS EARN

01 Trading volume

The protocols collect fees on the transactions that pass through their infrastructure.

02 Liquidity

Part of the income comes from the work of markets, liquidity pools and the movement of capital.

WHERE YOUR COMPANY COMES IN

Your company holds a stake in these protocols as a long-term owner — and is therefore entitled to a share of their income.

In essence, it works like dividends on shares: own a stake in the system, receive a share of its profit.

Why these three?

The financial world is steadily going digital.

More and more assets are being tokenised.
More and more services are moving onto open financial infrastructure.

Aero Finance, Curve Finance and Frax Finance are among the protocols this new system is already being built on.

That is why they became the foundation of your digital company.

Why are the assets locked?

4
YEARS

All of the company's assets are committed to a long-term 4-year lock — the maximum term available. This is programmed in by design.

It is not a restriction — it is a strategy: the company has time to unfold and gather momentum.

The lock is also built-in protection: against impulsive selling, against theft of funds, and against hacking.

And it is the lock that entitles the company to a share of the value and cash flows the protocols create.

Your company does not merely hold assets. It takes part in their work — and earns the right to a share of the cash flow they create.

Your company is already at work

It needs no day-to-day management. The core mechanics are already written into the protocols' code.

Cash flows accrue automatically — in normal operation, roughly every week.

WITHDRAW

You can collect them whenever you want to put that cash flow to use.

ACCUMULATE

Or leave them untouched — and they will simply accumulate on your company's balance.

CASH FLOW

4–8%+

per year — as a guideline

Think of it as dividend logic: your company owns digital infrastructure and can receive part of the value it creates.

Important: this is not a guaranteed return. Cash flow depends on the protocols, the market and overall activity in the ecosystem.

How the company can grow

01

Growth in asset value

If the company's underlying assets rise in price, the value of the company itself rises too.

02

Growth in cash flows

If the protocols grow stronger and more capital flows through them, your company's cash flows can grow as well.

The more traditional finance moves onto DeFi rails, the more room there is for companies like this to develop.

Full transparency

Your company lives entirely on the blockchain. Through DeBank you can see its assets, value, accruals and the movement of cash flows.

Everything can be verified at any time.

THE COMPANY'S DIGITAL ADDRESS

05081966.eth

The name is registered to the owner's date of birth — 05.08.1966. It is one of a kind across the entire blockchain: no such address exists elsewhere, and none ever will, however many may want it.

DATE OF BIRTH = ADDRESS

The Company's address is bound to the name. You never need to know the long crypto address: the date of birth is enough — transfers and any digital assets arrive straight to the name.

NO LINK TO IDENTITY

And yet the name reveals nothing about its owner: no legal name, no documents, no personal data. Uniqueness — without giving up privacy.

A WORKING ADDRESS

Funds can be sent to it and the Company's balance topped up — at any moment, from anywhere in the world.

POTENTIAL

A universal ID for the new internet: sign in to services, apps and metaverses with a single name — no passwords, no intermediaries.

A date that became an address. A name that works for you.

Guideposts for the journey

Five scenarios for the company. These are guideposts, not guarantees.

NEGATIVE −2–3×

Force majeure in the market or the economy — no one is immune. Invested capital may fall 2–3×+, and cash flow may stop entirely.

NEUTRAL 4–8+%

No growth — but the invested capital keeps working: a cash flow of 4–8+% per year.

MODERATELY POSITIVE 10–20×

Capital grows 10–20×+ over 3–5+ years. Plus a cash flow of 4–8+% per year.

POSITIVE 30–80×

The company's TVL grows 30–80×+ over 3–5+ years. Plus a cash flow of 4–8+% per year.

ULTRA POSITIVE 100–200×

The company's TVL grows 100–200×+ over 3–5+ years. Plus a cash flow of 4–8+% per year.

A LIVING EXAMPLE

$300

the company's starting capital

What could happen to it over 3–5+ years — across five scenarios: capital, cash flow per year and per month.

SCENARIO	CAPITAL	YEAR	MONTH
Negative	$100–150	$0	$0
Neutral	$300	$12–24+	$1–2+
Moderately positive	$3,000–6,000+	$120–480+	$10–40+
Positive	$9,000–24,000+	$360–1,900+	$30–160+
Ultra positive	$30,000–60,000+	$1,200–4,800+	$100–400+

These figures illustrate scenarios — they are not a guarantee. Cash flow assumes the 4–8+% per year guideline on current capital.

Flexibility and horizon

The company is built to be flexible: new assets can be added to its balance over time, whenever you choose.

So the company can grow not only with the market, but also through the owner's top-ups.

3–5+ years

The optimal span for the company to unfold and gather momentum.

The portfolio of the future

The cash flow the Company already generates is its own investment budget. With it, the Company can gradually acquire new assets and grow by itself — on its own profit.

TOKENISED REAL ESTATE

Stakes in real properties around the world — with rental income paid straight to the Company's balance.

TOKENISED ASSETS

Equities, gold, bonds and other classic instruments — in digital form, with no intermediaries.

COLLECTIBLES

Art, rare objects and digital collections — assets treasured for decades.

A company that earns by itself — and buys by itself. A flywheel that spins up over the years.

The physical key

The key to the company is a seed phrase, handed over on paper. It stays with the owner: off the internet, off any server, out of anyone else's hands.

The digital company lives on the blockchain — while access to it lives on paper. That makes ownership truly personal and tangible.

Whoever holds the seed phrase, owns the company.

Rules for keeping the key

The seed phrase is the only key to the Company. Treat it as the most valuable document you will ever hold.

01 **NEVER PHOTOGRAPH IT**

No photos, no phone notes, no cloud storage. Paper only.

02 **NEVER SHOW IT**

Never take it out in public places or anywhere with cameras. No one should ever see it.

03 **MAKE COPIES**

Several paper copies — kept in different secure places. A safe, a bank deposit box, a trusted location.

Losing the seed phrase means losing access to the Company. No one can ever recover it.

An honest word

The Company's assets are volatile. Over the short run, anything can happen: rallies, corrections, drawdowns — all a natural part of digital markets.

That is why the right horizon is long-term: 3–5+ years. It is over that distance that the Company's design reveals itself.

3–5+ years — the distance an owner looks across. Short-term swings lose their meaning along the way.

All calculations and guideposts in this book illustrate possible scenarios; they are not a guarantee of results, nor financial advice. Decisions on topping up the balance rest with the owner alone.

Congratulations: you are the owner of a company.

Not a thing, not a certificate — a living digital company that is already working on its own.

It grows together with the new financial infrastructure — and asks nothing of its owner day to day.

WELCOME TO A NEW FORM OF OWNERSHIP

Certificate of ownership

DIGITAL COMPANY MMXXVI

CERTIFICATE OF OWNERSHIP

This is to certify ownership of the digital company

05081966.eth

The company is registered on the Ethereum blockchain under a unique name formed from the owner's date of birth. No other such name exists — and none ever will. The company operates autonomously and belongs to the holder of the key.

202 Aero	393 FRAX	480 CRV
AERO FINANCE	FRAX FINANCE	CURVE FINANCE

Assets are committed to the maximum four-year lock and share in the protocols' cash flows · guideline 4–8+% per year
